Key Message

The New Technology Foundation is a school development organization that is transforming high school education in the United States. The Foundation works with innovative, forward-thinking states and school districts that are committed to preparing students for success in a technology immersed society and globally competitive economy.

The New Technology Foundation's student-centered model makes learning and teaching relevant and exciting. Through rigorous, standards-based, project learning implemented in a one-to-one computer-student environment, students develop a wide range of critical skills that prepare them for success in post-secondary education and the modern workforce. Teaching and learning in this environment are collaborative, personalized and interdisciplinary.

The New Tech Network is comprised of small public schools that are utilizing this proven and successfully replicated model. The New Technology Foundation provides these schools a suite of transferable and transformational tools, technology and concepts to help teachers develop and share projects, authentic assessment rubrics and other best practices. This collaborative learning community is continuously growing, innovating and sharing best practices across the New Tech Network.
